CLASS TEST 2019-2020

MECHANICAL ENGINEERING

Date of Test: 17/09/2019

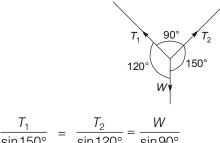

F	ANSWER KEY		>	Engineering Mechanics						
	1.	(b)	7.	(b)	13.	(d)	19.	(c)	25.	(d)
	2.	(b)	8.	(a)	14.	(c)	20.	(b)	26.	(d)
	3.	(c)	9.	(b)	15.	(c)	21.	(c)	27.	(a)
	4.	(b)	10.	(d)	16.	(c)	22.	(a)	28.	(a)
	5.	(a)	11.	(d)	17.	(b)	23.	(d)	29.	(b)
	6.	(a)	12.	(a)	18.	(c)	24.	(c)	30.	(a)

DETAILED EXPLANATIONS

1. (b)

Applying Lami's Theorem,

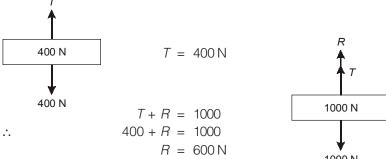

$$\frac{T_1}{T_2} = \frac{\sin 150^{\circ}}{\sin 120^{\circ}}$$

$$\frac{T_1}{T_2} = 0.577$$

2. (b)

:.

Drawing free diagram of blocks, we have,

This is the reaction from the ground and it is the same force with which the 1000 N block press against the floor.

3. (c)

$$\omega = (12 + 9t - 3t^{2})$$

$$\frac{d\omega}{dt} = 9 - 6t = 0, t = 1.5 \text{ s}$$

$$\omega_{max} = 12 + 9 \times 1.5 - 3 \times 1.5^{2}$$

$$= 12 + 13.5 - 6.75$$

$$= 18.75 \text{ rad/s}$$

4. (b)

The velocity of point Q is zero, as the point Q is in contact with the surface.

5. (a)

Torque,
$$T = mg \times \frac{L}{2}$$

$$I_0 = \frac{mL^2}{3}$$

$$\alpha = \frac{T}{I_0} = \frac{mgL}{2} \times \frac{3}{mL^2} = \frac{1.5g}{L}$$

6. (a)

$$a = \frac{f}{m} = -\frac{bv}{m}$$

but,

$$a = v \frac{dv}{dx}$$

:.

$$\frac{vdv}{dx} = -\frac{bv}{m}$$

(at time infinity means steady state)

$$\int_{u}^{0} dv = -\frac{b}{m} \int_{0}^{x} dx$$

$$-u = -\frac{b}{m} \times x$$

x = mu

7. (b)

 \Longrightarrow

Resolving the forces in horizontal and vertical components.

Horizontal components, $\Sigma F_X = 60 \cos 30^{\circ} - 80 \cos 45^{\circ} = -4.607$

Vertical components, $\Sigma F_{Y} = 80 \sin 45^{\circ} + 60 \sin 30^{\circ} = 86.568$

Resultant,
$$R = \sqrt{(\Sigma F_X)^2 + (\Sigma F_Y)^2} = \sqrt{(-4.607)^2 + (86.568)^2}$$

= 86.69 N

8. (a)

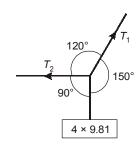

As the body is in equilibrium, using Lami's theorem

$$\therefore \qquad \frac{T_1}{\sin 90^\circ} = \frac{4 \times 9.81}{\sin (120^\circ)}$$

$$T_1 = 45.310 \,\text{N}$$

$$\frac{T_2}{\sin 150^\circ} = \frac{4 \times 9.81}{\sin 120^\circ}$$

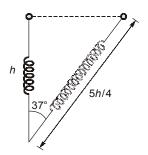

$$\Rightarrow$$
 $T_2 = 22.65 \,\mathrm{N}$

9. (b)

:. The kinetic energy of the ring will be given by the potential energy of spring.

 \therefore Let V be the speed of the ring when the spring becomes vertical

$$\frac{1}{2}mV^{2} = \frac{1}{2}k[X]^{2}$$

$$X = \frac{5h}{4} - h = \frac{h}{4}$$

$$mV^{2} = k\left[\frac{h}{4}\right]^{2}$$

$$V = \frac{h}{4}\sqrt{\frac{k}{m}}$$

10. (d)

Let u, v, w be the components of velocity in x, y and z direction respectively.

Similarly,
$$v = -3 \sin t$$

$$v = \sqrt{5} \cos t$$

$$V = \sqrt{u^2 + v^2 + w^2}$$

$$= \sqrt{(2\cos t)^2 + (-3\sin t)^2 + (\sqrt{5}\cos t)^2}$$

$$V = \sqrt{4\cos^2 t + 9\sin^2 t + 5\cos^2 t}$$

$$V = \sqrt{9(\sin^2 t + \cos^2 t)} = 3 \text{ units}$$

11. (d)

$$\omega_0 = 8000 \text{ rpm} = 837.33 \text{ rad/s}$$
 $t = 5 \text{ min} = 300 \text{ s}$

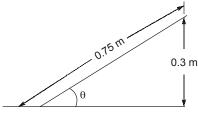

$$\theta = \omega_0 t + \frac{1}{2} \alpha t^2$$

$$\alpha = \frac{\omega - \omega_0}{t} = -\frac{837.33}{300} = -2.791 \text{ rad/s}^2$$

$$\theta = 837.33 \times 300 - 0.5 \times 2.791 \times (300)^2 = 125604 \text{ rad}$$

$$\therefore \qquad \text{Number of revolutions} \ = \ \frac{\theta}{2\pi} = 19990.49 \simeq 19991$$

12. (a)

Coefficient of friction $= \mu$ $\mu = \tan \theta$

From figure,
$$\sin\theta = \frac{0.3}{0.75} = 0.4$$

$$\Rightarrow \qquad \qquad \theta = \sin^{-1}(0.4)$$

$$\begin{array}{lll} \therefore & \theta = 23.57^{\circ} \\ & \mu = \tan\theta \end{array}$$

$$tan 23.57^{\circ} = 0.436$$

 $\tan 23.57^{\circ} = 0.43$

or

mg
$$\sin \theta = (f_s)_{max} = \mu N$$

 $N = \text{mg } \cos \theta$
 $\tan \theta = \mu$
 $\mu = 0.436$

13. (d)

For no tipping or prevent overturning

$$Ph < \frac{Wb}{2}$$

where $W \rightarrow \text{weight of block}$ and $b \rightarrow \text{width of block}$

$$h < \frac{Wb}{2P} \qquad \dots (1)$$

and for slipping without tipping

$$P > \mu W$$
 ...(2)

From (1) and (2)

$$h < \frac{b}{2\mu}$$

$$\therefore \qquad \qquad h < \frac{60}{0.6}$$

Option (d) is correct.

14. (c)

$$I = 2000 \times 0.25^2 = 125 \text{ kg-m}^2$$

for retardation, $\omega = \omega_0 + \alpha t$

$$\omega = 0$$

$$\omega_0 = \frac{2\pi N}{60} = \frac{2\pi \times 3000}{60}$$

$$t = 10 \, \text{min} = 600 \, \text{sec}$$

$$\alpha = \frac{2\pi \times 3000}{60 \times 600} = 0.5236 \text{ rad/s}$$

So, average frictional torque,

$$I\alpha = 65.44 \, \text{Nm}$$

15. (c)

Resistance =
$$mg + W = 200 \times 9.81 + 100$$

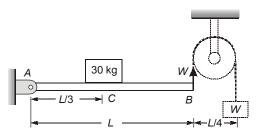

= 2062 N

$$\therefore \qquad \qquad a = \frac{2062}{200}$$

$$a = 10.31 \,\text{m/s}^2$$

$$\frac{V^2}{2a} = S = \frac{4^2}{2 \times 10.31} = 0.776 \text{ m}$$

16. (c)

W is the tension in the string.

Taking moments from end A

$$W \times L = 30 \times 9.81 \times L/3$$
$$W = 98.1 \text{ N}$$

17. (b)

:.

$$a = -t$$

$$dV = -tdt$$

$$V = -\frac{t^2}{2} + C_1$$

$$7.5 = 0 + C_1 C_1 = 7.5$$

$$C_1 = 7.5$$

$$V = -\frac{t^2}{2} + 7.5$$

$$V_{\text{at 3s}} = \frac{-3^2}{2} + 7.5 = 3 \text{ m/s}$$

$$V_{\text{at 3s}} = 3 \text{ m/s}$$

18. (c)

In xy direction

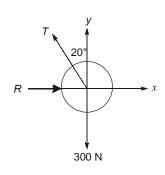

$$-T \sin 20^{\circ} i + T \cos 20j + Ri - 300j = 0$$

$$(R - T\sin 20^\circ)i + (0.947 - 300)j = 0$$

$$R - T\sin 20^\circ = 0$$

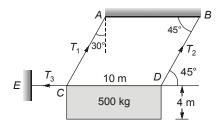

$$0.94 T - 300 = 0$$

(Tension)
$$T = \frac{300}{0.94} = 319.15 N$$

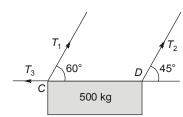

India's Best Institute for IES, GATE & PSUs

19. (c)

Considering free body diagram of the block.

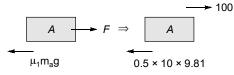

: The body is in equilibrium,

Now, taking moment about C

$$T_2 \sin 45^{\circ} \times 10 = 500 \times 5$$
$$T_2 = 353.55 \text{ kg}$$

20. (b)

Drawing free-body diagram of A and B.

Writing equation of motion for A.

$$100 - 0.5 \times 10 \times 9.81 = 10a$$

$$a = 5.095 \text{ m/s}^2$$

$$\mu_1 m_a g$$

$$B \Rightarrow B$$

$$\mu_2 (m_a + m_b) g \leftarrow 0.1 \times 18 \times 9.81$$

Writing equation of motion for B.

$$49.05 - 17.658 = 8 \ a$$

$$\Rightarrow \qquad \qquad a = 3.924 \ \text{m/s}^2$$
 After 0.1s,
$$V_A = U_a + a_a t.$$

$$V_A = 0 + 5.095 \times 0.1$$

$$V_A = 0.5095 \ \text{m/s}$$
 Similarly,
$$V_B = 0 + 3.924 \times 0.1$$

$$V_B = 0.3924$$

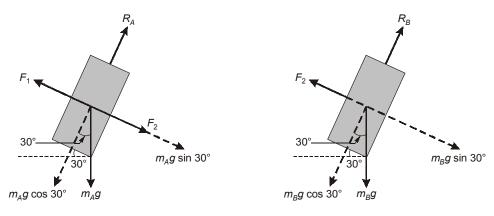

$$\therefore \text{ Relative velocity of } A \text{ wrt } B = V_A - V_B$$

$$= 0.5095 - 0.3924 = 0.117 \ \text{m/s}$$

21. (c)

The FBD of the blocks A and B are shown below

Here F_1 and F_2 are the spring forces.

$$F = k\Delta z = k (x_0 - x_{\text{unstretched}})$$

 $F_1 = 1000 \times (0.3 - 0.25) = 50 \text{ N}$
 $F_2 = 1000 \times (0.28 - 0.25) = 30 \text{ N}$

and

At equilibrium,

 Σ Forces along the plane for mass A = 0

$$\Rightarrow -F_1 + F_2 + m_A g \sin 30^\circ = 0$$

$$\Rightarrow m_A = \frac{F_1 - F_2}{g \sin 30^\circ} = \frac{50 - 30}{9.81 \times 0.5} = 4.08 \text{ kg}$$

and Σ Forces along the plane for mass B=0

$$\Rightarrow$$
 $-F_2 + m_B g \sin 30^\circ = 0$

$$\Rightarrow m_B = \frac{F_2}{g \sin 30^\circ} = \frac{30}{9.81 \times 0.5} = 6.12 \text{ kg}$$

22. (a)

K.E. =
$$\frac{1}{2}I\omega^2$$

$$I = \frac{mr^2}{2} = \frac{20 \times (0.2)^2}{2} = 0.4 \text{ kgm}^2$$

$$\omega = \frac{2\pi N}{60} = \frac{2 \times 3.14 \times 500}{60} = 52.33 \text{ rad/s}$$
K.E. = $\frac{1}{2} \times 0.4 \times 52.33^2 = 547.68 \text{ J}$

23. (d)

Let speed of car moving in opposite direction is V m/s. From relative velocity approach

$$\frac{12}{V+50} = \frac{5}{60}$$

$$12 \times 60 = 5 V + 250$$

$$V = 94 \text{ km/hr}$$

MADE EASY India's Best Institute for IES, GATE & PSUs

24. (c)

- : Velocities are in opposite directions,
- \therefore I will lie between A and B,

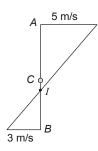

$$\frac{IA}{IB} = \frac{V_a}{V_b} = \frac{5}{3}$$

$$\frac{0.5 - IB}{IB} = \frac{5}{3}$$

$$IB = 0.1875 \,\text{m}$$

$$IA = 0.3125 \,\text{m}$$

$$\omega = \frac{V_A}{IA} = \frac{5}{0.3125} = 16 \,\text{rad/s}$$

Alternatively,

$$V_A = V_C + R\omega$$

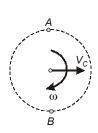

$$V_B = R\omega - V_C$$

$$V_C + R\omega = 5$$

$$R\omega - V_C = 3$$

$$V_C + 0.25 \omega = 5 \qquad ...(a)$$

$$0.25 \omega - V_C = 3 \qquad ...(b)$$
On solving (a) and (b)

On solving (a) and (b),

$$\omega = 16 \text{ rad/s}$$
 $V_C = 1 \text{ m/s}$

where V_C = velocity of centre C.

25. (d)

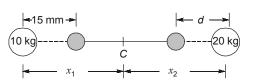

To keep centre of mass at C

$$m_1 x_1 = m_2 x_{2]}$$

$$\rightarrow \qquad \text{(Let 10 kg} = m_1, 20 \text{ kg} = m_2\text{)}$$
and
$$m_1 (x_1 - 15) = m_2 (x_2 - d)$$

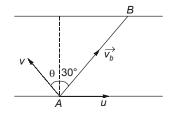

$$15 m_1 = m_2 d$$

$$d = \frac{15 \times 10}{20} = 7.5 \text{ mm}$$

26. (d)

Let v be the speed of boatman in still water

Resultant of u and v should be along AB. Components of \vec{v}_b (absolute velocity of boatman) along x and y -direction are:

$$v_x = u - v \sin \theta, \ v_y = v \cos \theta$$

$$\tan 30^\circ = \frac{v_y}{v_x}$$

$$0.577 = \frac{v \cos \theta}{u - v \sin \theta}$$

$$0.577 u - 0.577 v \sin \theta = v \cos \theta$$

$$v = \frac{0.577 u}{0.577 \sin \theta + \cos \theta}$$

$$v = \frac{(0.577 \times \cos 30^\circ) u}{\sin 30^\circ \sin \theta + \cos 30^\circ \cos \theta}$$

$$v = \frac{0.49964}{\sin(\theta + 30^\circ)}$$

$$v \text{ is minimum at } \theta = 60^\circ,$$

$$v_{\text{min}} = 0.49964$$

$$v_{\text{min}} \simeq 0.54$$

27. (a)

Velocity of A is v along AB and velocity of particle B is along BC, its component

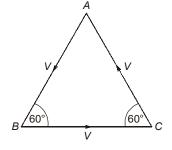

along
$$BA$$
 is $v\cos 60^\circ = \frac{v}{2}$.

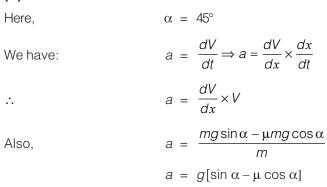

Thus separation AB decreases at the rate of

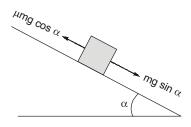

$$V + \frac{V}{2} = \frac{3V}{2}$$

Since this rate is constant, time taken in reducing separation from *AB* from *d* to zero is

$$\therefore g[\sin \alpha - \mu \cos \alpha] = \frac{dV}{dx} \times V$$

$$\therefore g[\sin \alpha \cdot dx - 5x \cos \alpha dx] = V \cdot dV$$

On integrating,

$$g\left[\sin\alpha \cdot x - 5\cos\alpha \times \frac{x^2}{2}\right] = \left[\frac{V^2}{2}\right]_0^0$$
$$g\left[\sin\alpha \cdot x - 5\cos\alpha \times \frac{x^2}{2}\right] = 0$$

$$\Rightarrow \sin\alpha \cdot x = 5\cos\alpha \times \frac{x^2}{2}$$

$$x = \frac{2\tan\alpha}{5} \Rightarrow \frac{2\tan 45^\circ}{5} = 0.4 \,\text{m}$$

29. (b)

We have, Torque = $I\alpha$

$$\therefore 3F \sin 30^{\circ} \times 0.5 = I\alpha$$

$$3 \times 0.5 \times \frac{1}{2} \times 0.5 = 1.5 \times \frac{0.5^2}{2} \times \alpha$$

$$\therefore \qquad \qquad \alpha = 2 \, \text{rad/s}^{-1}$$

$$\omega = \omega_0 + \alpha t$$

$$\omega = 0 + 2 \times 1$$

$$\omega = 2 \, rad \, s^{-1}$$

30. (a)

$$T = 2\pi \sqrt{\frac{L}{g}}$$

$$g = \frac{4\pi^2 L}{T^2}$$

In given problem
$$T = \frac{36}{20} = 1.8 \text{ s}$$

$$g = \frac{4 \times \pi^2 \times 0.8}{1.8^2} = 9.74 \text{ m/s}^2$$
